2. PRODUCTS
   A. Low volatile organic compound (VOC) materials shall be used within the interior weatherproofing of the facility; zero when available. Refer to section 01 35 46 Indoor Air Quality – During Construction.
   B. UGA Athens Campus Only – The UGA FMD Building Services department implemented a Green Cleaning program for campus facilities in 2005. Design Professionals and Contractors shall specify and install products with finishes that can be successfully cleaned and maintained with the Green Cleaning program’s certified cleaning products. Acceptable Green Cleaning certified products are listed below. Exceptions as deemed appropriate by the Project Manager.
      i. Acceptable manufactures are:
         a. Designed For The Environment (DFE)
         b. Eco Logo
         c. Green Seal
      ii. Acceptable chemical and waxing products are:
         a. Green Solutions Floor Finish Remover (350504) – wax stripper
         b. Green Solutions Floor Seal & Finish (350404) – wax/sealer
         c. Green Solutions Grass Cleaner 102 – window cleaner
         d. Peroxy Clean (003504) – general purpose cleaner
   C. All specified materials must have a demonstrated history in a similar institutional setting, with similar regularity of cleaning and maintenance, for at least five years.
   D. FMD Projects only – For animal rooms and other specialized locations, utilize a seamless polymer for the floor, wall, and lining systems.

3. EXECUTION
   A. Contractor shall include product cleaning requirements for all surfaces in the close out documents.
1. **GENERAL**

   A. **Related sections:**
      i. 09 00 00 – General Finishes Requirements
      ii. 09 30 00 - Tiling
      iii. 22 40 00 – Plumbing Fixtures

   B. **Size:**
      i. The size of the custodial closet shall be large enough to store equipment and supplies with a minimum size of 5’6” x 8’0” and shall be the sole dedicated use of the room. See recommended layout at end of this section.
      ii. If building requires large equipment and battery powered machines for maintenance, then the Custodial Storage room shall be larger than the minimum size of 5’6” x 8’0” and provide power outlets for charging and a service sink. Design Professional shall consult with Project Manager to determine if this is needed during programming and appropriate size.

   C. The walls shall be a light color.

   D. **Floor surface options in order of preference by FMD:**
      i. Epoxied concrete
      ii. Sealed concrete
      iii. VCT or resilient tile
      iv. Tile with nonporous grout. See related section 09 30 00 – Tiling.

   E. **Service Sink**
      i. See related section 22 40 00 – Plumbing Fixtures, 2.B.xv. Service Sinks.
      ii. It shall be accessible without emptying closet.
      iii. The mop sink shall be floor mounted with a 24” tall stainless steel backsplash.

   F. **Faucet**
      i. See related section 22 40 00 – Plumbing Fixtures, 2.B.xv. Service Sinks.

   G. **Lighting**
      i. The light fixture lamps shall be protected by cage or diffuser.

   H. **Shelving**
      i. There shall be two 12” x 48” shelves for chemicals.
      ii. There shall be two 12” x 48” for supplies.
      iii. There shall be adjustable brackets with 30” heavy duty standards
      iv. The height to the bottom shelf shall be 48”.

   I. **Door**
      i. The door shall be a minimum of 36” wide and if code allows, swing out of the room.
      ii. The custodial closet shall be individually keyed with access limited to FMD.

   J. **Tool Holders and Mop Brackets**
      i. Shall be provided and installed by FMD after Material Completion.
      ii. One tool holder shall be mounted over sink and preferably not over the faucet.
      iii. One tool holder shall be mounted near door for brooms and dust mops.
      iv. Mop brackets are mounted on 1 x 4 provided by FMD.
Custodial Storage Layout Legend

Contractor Furnished and Installed
1. Floor mounted sink
2. Stainless steel backsplash to 24" above floor sink
3. Individual keyed lock
4. Wire protector for light fixture if bare bulb is exposed
5. Adjustable shelves – 12"W x 48"L
6. Coat hook

Owner Furnished and Owner Installed
7. Chemical Lock & Dial
8. “Gripit” tool holder
9. Hose – 36'L
1. **GENERAL**
   A. Related sections:
      i. 01 35 46 – Indoor Air Quality Procedures – During Construction

2. **PRODUCTS**
   A. Low volatile organic compound (VOC) materials shall be used within the interior
      weatherproofing of the facility; zero when available. Refer to section 01 35 46 Indoor
      Air Quality – During Construction.
   B. Regional Materials: Gypsum board shall have been manufactured within 500 miles of
      the project site. Provide documentation as requested by the Project Manager.
   C. Standard gypsum wall board product thickness is 5/8”. For typical wall assemblies, 1/2”
      gypsum board is prohibited.
   D. Wet areas and/or tile backer board:
      i. Use cement backer board for tile.
      ii. Paper-faced moisture resistant gypsum board panels (“green board”) are not
          allowed.
   E. Abuse resistant gypsum board and/or impact resistant gypsum board shall be
      considered for public areas, corridors and student rooms. Design Professional shall
      coordinate with Project Manager.
   F. **For UGA Housing Only (New Construction)**
      i. Abuse resistant, impact-resistant gypsum board for all public spaces, corridors,
         and student residential rooms.
      ii. Joint treatment and wall finish shall be level 5 finish for all painted walls in
          accordance with the “Recommended Specification: Levels of Gypsum Board
          Finish” as published by the Gypsum Association and level 4 finish for all painted
          ceilings.
      iii. Joint tape shall be paper tape as approved by abuse-resistant panel
           manufacturer.
      iv. Corner reinforcement shall be galvanized steel with 1-1/4” wide fine expanded
          mesh flanges.

3. **EXECUTION**
   A. Install gypsum board only after building is enclosed.
   B. If plaster or gypsum board repairs that cause air borne dust are made as part of the
      punchlist corrections prior to Final Completion, the Contractor is responsible for full
      cleaning of areas that are affected by the plaster or gypsum board dust at no additional
      cost to the Owner. This includes cleaning of all affected surfaces like windows, furniture,
      carpets, etc. If final air filters were installed prior to any plaster or gypsum board
      punchlist corrections, Contractor is responsible for replacing air filters that serve
      affected areas again at no additional cost to the Owner.
1. GENERAL
   A. Related sections:
      i. 01 35 46 – Indoor Air Quality Procedures – During Construction
      ii. 09 00 00 – General Finishes Requirements
      iii. 09 00 00.01 – Custodial Storage
   B. For public areas with high levels of pedestrian traffic, especially main entry
      lobbies and corridors, it is preferable to use a durable, low maintenance, long lasting
      floor material like granite.

2. PRODUCTS
   A. Low volatile organic compound (VOC) materials shall be used within the interior
      weatherproofing of the facility; zero when available. Refer to section 01 35 46 Indoor
      Air Quality – During Construction.
   B. Regional Materials: See below for granite tile requirements. All other tile products shall
      have been extracted, harvested or recovered, as well as manufactured, within 500 miles
      of the project site for a minimum of 20%, based on cost, of the total materials value of
      flooring excluding granite tiling. Provide documentation as requested by the Project
      Manager.
   C. Silver Cloud Granite:
      i. When the Project budget can afford granite flooring, the main field granite color
         shall be Silver Cloud (a granite with a marbling of grays and whites).
      ii. Silver Cloud granite shall be quarried, cut, and finished within 500 miles of the
          project site.
      iii. The basis of design is Silver Cloud granite quarried in Lithonia, Georgia by Broad
          River Quarries which is located in Elberton, GA, 706-213-1255 or North Carolina
          Granite, Mt. Airy, NC, 336-786-5141.
      iv. Depending on the tile module selected for the space, the tile may be thin-set
          tiling or mortar-bed tiling.
      v. The interior granite surface finish shall be honed with a clear penetrating sealer.
   D. Grout at restrooms and food service areas shall:
      i. Use epoxy type grout meeting ANSI 118.3.
      ii. Dark grout colors are preferred for floors.

3. EXECUTION
   A. For granite tile installation, the Contractor shall coordinate a pre-installation meeting
      with the Design Professional, Project Manager, and tile subcontractor. It is understood
      that granite is a natural material and that color variation will occur; however, the
      Contractor and tile subcontractor are responsible for the complimentary color and
      granite patterning distribution. Attention shall be given to the placement of matched
      tiles as directed by the Design Professional and Project Manager. The Contractor and
      tile subcontractor shall avoid placing noticeably lighter Silver Cloud pieces in a field of
      darker Silver Cloud pieces and vice-versa. If this situation occurs without prior approval
      from the Project Manager, the Contractor shall remove and reinstall pieces as directed
      by the Project Manager at no additional cost to the Owner.

   A. Related sections:
      i. 09 00 00 – General Finishes Requirements
      ii. 26 51 00 – Interior Lighting
   B. Ceilings and mechanical/electrical equipment coordination:
      i. Mechanical and electrical access to equipment above a hard-lid ceiling requires a minimum of 24” x 24” access panel with clear path to the equipment.
      ii. Coordination with mechanical, electrical, and plumbing equipment is required when laying out ceiling grids and supports; no mechanical, electrical, or plumbing access should be blocked
      iii. A ‘Maintenance Access’ zone (vertically & horizontally) is to be defined and called out on drawings and maintained through final construction.
      iv. Lighting shall not be located in the ‘Maintenance Access’ zones or access points.
      v. Removal of ceiling tiles may not be blocked by equipment locations.
         a. 6-inches from the suspended ceiling to the bottom of equipment & ductwork is required for ceiling tile removal.

2. **PRODUCTS**
   A. Concealed spline ceiling support systems are not allowed.
   B. 2’ x 4’ ceiling grid and tile not allowed.

3. **EXECUTION**
   A. Fiberglass batt insulation is not allowed to be placed directly on top of acoustical ceiling tiles.

      iv. 09 68 00 – Carpeting

2. **PRODUCTS**
   
   A. Low volatile organic compound (VOC) materials shall be used within the interior weatherproofing of the facility; zero when available. Refer to section 01 35 46 Indoor Air Quality – During Construction.
   
   B. Regional Materials: For carpeting, refer to section 09 68 00 Carpeting. All other flooring products shall have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site for a minimum of 20%, based on cost, of the total materials value of flooring excluding carpeting. Provide documentation as requested by the Project Manager.
   
   C. Vinyl Composition Tile (VCT) shall contain a minimum 10% post-consumer recycled content or a minimum 5% post-consumer recycled content combined with a minimum 10% pre-consumer recycled content.
   
   D. **FMD Projects Only**
      
      i. Epoxy flooring: For renovations with existing exposed concrete flooring in the auditorium, apply a two-component, high performance, polyamide-epoxy coating. Primer and finish coat shall be compatible and by the same manufacturer. Clean and prepare substrate according to manufacturer’s specifications to ensure proper bonding.
1. **GENERAL**
   A. Related sections:
      i. 01 35 46 – Indoor Air Quality Procedures – During Construction

      iv. 12 48 26 – Entrance Carpet Tile
   B. Any existing carpeting that is removed must be recycled per section 01 74 19 Construction Waste Management and Disposal.
   C. As part of the submittals, provide flame spread documentation demonstrating compliance of carpets with code requirements. State the minimum requirements per the applicable codes and the flame spread of the products.
   D. Carpeting is prohibited in telecommunications MDF / IDF rooms.

2. **PRODUCTS**
   A. Low volatile organic compound (VOC) materials shall be used within the interior weatherproofing of the facility; zero when available. Refer to section 01 35 46 Indoor Air Quality – During Construction.
   B. Regional Materials: Provide carpets that have been manufactured within the state of Georgia. Provide documentation as requested by Project Manager.
   C. Use only carpet and carpet cushion that meets or exceeds requirements of Green Label Plus, set by the Carpet and Rug Institute.
   D. Any carpet cushion shall be an attached backing system to the carpet and not a separate underlayment system.
   E. The Design Professional shall forward manufacturer’s suggested carpet maintenance cleaning methods to the Project Manager for review and approval.
   F. Minimum 10-year manufacturer’s warranty covering: wear, edge ravel, tuft bind, delamination, and static control.
   G. Requirements for carpeting attic stock shall be coordinated with the Project Manager.
1. **GENERAL**
   A. Wall coverings are a long term maintenance issue.

2. **PRODUCTS**
   A. Vinyl coated fabric wall coverings, flexible vinyl wall coverings, rigid sheet vinyl wall coverings, and wallpaper are not allowed. Wall coverings are occasionally allowed as specialty accents, but must be approved through the variance process.
   B. Textile wall coverings are not allowed unless they are part of an acoustical wall treatment system approved by the Project Manager.

   A. Related sections:
      i. 01 32 16 – Construction Progress Schedule
      ii. 01 35 46 – Indoor Air Quality Procedures – During Construction
   B. In addition to card stock brush-outs, Contractor shall provide 6’x6’ in place samples for each paint color, with final light fixtures and lamps in place, as requested by the Design Professional and/or Project Manager as part of the Cost of the Work or Bid.

2. **PRODUCTS**
   A. Low volatile organic compound (VOC) materials shall be used within the interior weatherproofing of the facility; zero when available. Refer to section 01 35 46 Indoor Air Quality – During Construction.
   B. All coatings shall be commercial grade.
   C. Acceptable Manufacturers:
      i. Benjamin Moore Company
      ii. PPG Paints
      iii. Sherwin-Williams Company
   D. Paint Sheens
      i. Painted walls shall have eggshell paint sheen.
      ii. Painted wood trim shall have semi-gloss sheen.
      iii. Flat paint sheen is prohibited on walls and trim.
